PERMIT ATTACHMENT:

Future Locating of Permitted Buried Facilities

The permit applicant/owner agrees to locate and mark the underground facility being permitted in the following manner:

- A: The utility company or facility owner, as condition of approval for this permit, agrees to locate the facility identified by this permit, when needed for future construction and maintenance activities. This information will be the basis of plans prepared by Park County for use by Park County, the County's contractors and the Park County maintenance crews. If relocation of the identified facility is necessary to aid Park County's work, reimbursement will be as provided for by law at the owner's expense.
- B. Location information will include the marking of the facility on the ground, as specified by W.S. 37-12-301 *et seq.*, with the appropriate color. Location information will also include the **nature and elevation** of the facility. For each location, the utility shall be tied both horizontally and vertically, by coordinates, to a datum determined by Park County and certified by a licensed surveyor. The information will be shown on plans created by the utility company or facility owner. A copy of the plans will be sent to Park County Engineer's Office, 1131 Eleventh Street, Cody, Wyoming, 82414. Costs associated with identifying and locating the facilities will be the responsibility of the utility company or facility owner in Park County right-of-way.

ACCEPTANCE: The undersigned represents that he/she has read and understands the General Conditions (on reverse side) and special conditions of this permit; has authority to sign for and bind the Applicant; agrees to comply with all applicable codes, ordinances, rules and regulations of Park County, Wyoming; and agrees that the Applicant shall indemnify and save the County harmless from and against all claims, demands, liabilities, damages, suits, actions or causes of action, of every kind and nature which may be brought or asserted against the County on account of the action of the Applicant under this permit.

R O W PERMIT APPLICATION **SKETCH GUIDELINES**

The sketch plan shall include enough information and detail to determine the exact location of the work scheduled and/or placement of any material, equipment, utility, or other apparatus within or affecting the Park County R O W including, but not limited to the following:

North Arrow Indication: Align sketch with north arrow pointing to top of page.

Name of the road(s) impacted by the work being done: Include nearest intersecting road names.

Provide sufficient detail on the sketch to determine location and distances from address markers, power poles, irrigation facilities, road intersections, trees and shrubs within 100 feet of work, etc. as applicable.

Indicate the specific work to be completed and location of such work (mailbox turnout, driveway access, utility placement, excavation areas, including any bore locations and road cuts), etc. Include the depth of any pipe, electrical lines or other apparatuses placed underground.

Identify the location of any specific marking devices intended to be placed to locate anything buried within the ROW including, but not limited to power lines, water lines and conduits.

It is the responsibility of the Utility/developer/contractor to verify the location of any work within the actual ROW and legitimate property lines.

All Utilities are required to submit pre-construction worksite pictures with the application and are to take pictures after the work is completed. Others are encouraged to do likewise.

GENERAL CONDITIONS

APPLICATION - An application for a permit must be made in accordance with Park County Road & Bridge Standards & Specifications prior to any person, firm or corporation cutting, opening or excavating any street or road, or within any County R.O.W., or other public place under the jurisdiction of Park County. The application form must be completed in full and accompanied by diagrams, sketches, plans and specifications, as appropriate to the application, before such application will be considered. The acceptance of an application form shall not be construed as an obligation for the County to issue a permit. When it appears that the work specified in an application would be in variance with County rules and regulations; or cause substantial or needless damage to a public facility; or create excessive disturbances to traffic; or result in exceptionally dangerous conditions not commensurate with the benefits of such application, the permit will not be issued. The failure of an applicant for a permit to satisfy the general and/or special conditions, or to perform satisfactorily under the terms of a previous permit, shall be just and sufficient cause for denial on subsequent applications.

CASH ESCROW - If required, prior to the issuance of a permit, the applicant shall deposit with the County Engineer a cash escrow in the amount and form as shall be determined by the County Engineer. The amount of the cash escrow shall be established separately for each permit and shall represent protection against the failure of the applicant to perform under the terms of the permit, including, but not limited to, the failure to restore the public place disturbed by the applicant. The collection, retention, and refund of such cash escrow shall be governed by the policies and/or procedures established by the County Engineer.

PERMIT FEE - Any applicant for a permit shall pay the appropriate fee for such permit, prior to its issuance, in the amount established by the County Engineer. An applicant who has commenced work prior to the application for or issuance of a permit shall be subject to a fee two (2) times the normal fee for such permit.

ISSUANCE OF PERMIT - A permit shall be issued after completion of all aspects of the general and special conditions have been satisfied. Applications for permits will generally be acted upon within ten (10) working days of receipt. The applicant for a permit is specifically forbidden to commence work until the permit for such has been issued, contingent upon giving the County Engineer at least twenty-four (24) hours advance notice of the exact date and time of commencing such work.

EMERGENCY REPAIRS - Nothing in these general conditions shall be construed to limit the making of such excavations as may be necessary for the preservation of life and property, or for the making of emergency repairs. An application for a permit for such emergency work shall be made on the first working day after such work has commenced.

REVOCAION OF PERMIT - Any permit issued by the County Engineer may be revoked by said County Engineer for cause without notice.

TIME EXTENSION - All permitted work shall be completed within the time limits specified on the permit, unless the applicant makes a request for a time extension. Such request shall be made by the applicant for a permit at least two (2) working days prior to the expiration of the time limit set forth on said application. Failure to request an extension in accordance with this time frame, or denial of such request, shall obligate the applicant to complete the work within the time limits initially set forth.

PROTECTION OF PUBLIC FACILITIES - The permittee shall perform in such manner as to not interfere with access to fire hydrants, water main valves, and underground equipment and facilities. The permittee shall not remove, even temporarily, any trees or shrubs within any public place unless specifically authorized to do so by the County Engineer. No road or other public facility shall be disturbed, destroyed or removed beyond the limits specified on the application for a permit.

TRAFFIC CONTROL - The permittee shall control traffic in and around the work area in full compliance with the requirements of the Manual on Uniform Traffic Control Devices (MUTCD), and the written and verbal directions issued by the County Engineer, or his agents and assigns. The permittee shall not limit access to private property and shall not hinder vehicular or pedestrian traffic in and around the work area unless expressly authorized to do so. The permittee shall be responsible for full compliance with traffic control requirements.

PROTECTION OF EXISTING UTILITIES - The permittee shall not interfere with any existing utility without the written consent of the owner(s) of such facilities. The permittee shall support and otherwise protect all pipes, conduits, poles, wires or other apparatus which may in any way be affected by the work, and do everything necessary to support, sustain and protect them under, over, along, or across said work. Should any such facility be damaged, the permittee shall immediately so notify the owner of such utility. All damaged facilities shall be repaired and/or relocated by the owner of such facilities, and the expense of such repairs and/or relocation shall be charged to the permittee. The permittee shall inform himself as to the existence and location of any and all underground facilities prior to commencing work, and shall protect such facilities against interference and damage.

INDEMNIFICATION - The applicant agrees to hold harmless Park County, Wyoming, the County Engineer, and his agents and assigns, from any and all claims and action whatsoever arising from the issuance of this permit, regardless of compliance with the general and special conditions as herein set forth.

PAVEMENT REMOVAL - All excavations of paved roads shall be pre-cut in neat, straight lines with a pavement saw. The width of the cut shall exceed the width of the trench at the level of the sub-grade by eighteen (18) inches on either side of the cut unless specified otherwise in the special conditions. Heavy duty pavement breakers may be prohibited when their use is judged to represent danger to existing substructures or other public or private property. Pavement removal lines shall be normal or parallel to the trench line. Pavement edges shall be trimmed to a vertical face and neatly aligned with the centerline of the trench. Unstable pavement shall be removed over the voids or cave-ins and over breaks, and the sub-grade shall be treated as the main trench. Pavement damage existing prior to the excavation by the permittee shall not be his responsibility unless his work results in the dislodgement of the damaged pavement section, in which case, the permittee shall remove the unstable portion and the area shall be treated as part of the excavation.

CLEAN-UP - All debris, rubbish and surplus materials resulting from work under the terms of this permit shall be removed and disposed of off-site as soon as possible, but in no event, no later than at the completion of construction. The work site shall not be used as a storage area for equipment, debris, rubbish or surplus materials. All property affected by the work under the terms of this permit shall be restored to a condition equal to or exceeding that existing prior to construction.

TRENCH BACKFILL - Localized excavations shall be backfilled with granular materials in lifts no greater than twelve (12) inches. Continuous excavations may be backfilled to within twenty-four (24) inches of the pavement surface with select, native materials, free of organic materials, lumps, large stone and frozen material, in lifts no greater than six (6) inches. Backfill material shall be thoroughly compacted by approved methods. The adequacy of the backfill effort shall be determined by the County Engineer, his agents and assigns, at his sole discretion.

TEMPORARY REPAIR - As soon as the excavation has been backfilled and compacted, the pavement surface shall at least receive a temporary repair on paved roads. The temporary repair shall consist of cold patch asphalt. On gravel roads, the temporary repair shall consist of carrying the approved backfill materials up to the surface of the adjoining pavement. Traffic shall not be allowed to pass over the work area until the temporary repair has been made. In the event of unacceptable maintenance, the permittee shall be so notified and shall make the required improvements within twenty-four (24) hours of notice before being liable for the cost of the County making such improvements. In emergency situations, the County will make the improvements immediately and will bill the permittee accordingly.

PAVEMENT REPAIR - Upon completion of backfilling, compaction, and temporary repairs, if any, the permittee shall complete the permanent repairs. The permanent repair shall be completed as soon as weather permits. On unpaved roads, the permanent repair shall consist of backfilling the trench to the level of the adjoining surface and re-grading the road surface to its original condition. The same requirements shall apply to excavations within shoulder areas adjacent to paved roads. On paved roads, the permanent repair shall consist of placing a pavement structure one (1) inch greater in thickness than that of the adjoining pavement, except that a bituminous pavement shall not be less than four (4) inches in thickness and that a concrete pavement shall not be less than seven (7) inches in thickness.

PERMITTED BURIED FACILITIES - The Permittee hereby agrees as follows:

1. The facility will be placed in a manner conforming to recognized standards, applicable federal, state, or local laws, codes, ordinances and regulations; in the exact location shown on the attached "Exhibit A"; and as directed by Park County. Placing the facility in a location other than originally approved without obtaining prior County approval by submitted a revised "Exhibit A," may void the license.
2. Any future alterations, modifications, or removals of the facility within the County Right-of-Way, required or requested by Park County, shall be completed without delay. Adjustments will be accomplished at no expense to the County, unless otherwise provided for by law.

INSPECTIONS - The County Engineer, his agents and assigns, shall make such inspections as are reasonably necessary for the enforcement of these general conditions. The conduct of such inspections shall not waive the permittee of his responsibility to conform to the general and special conditions as herein set forth, or to comply with any and all other rules and regulations as may reasonably apply.

WARRANTY - The permittee shall be responsible, when applicable, for any and all repairs necessary as a result of the excavation for a period of two (2) years after completing the permanent repairs to the satisfaction of the County Engineer.

EXCLUSION - This permit is a license for permissive use only and does not operate to create or to vest any property rights to the permittee. This permit does not in any way supersede any present codes or ordinances of Park County, Wyoming.
